**IEEE Std 765™-2012**

(Revision of  
IEEE Std 765-2006)

# **IEEE Standard for Preferred Power Supply (PPS) for Nuclear Power Generating Stations (NPGS)**

Sponsor

**Nuclear Power Engineering Committee  
of the  
IEEE Power and Energy Society**

Approved 5 December 2012

**IEEE-SA Standards Board**

**Abstract:** The design criteria of the preferred power supply (PPS) and its interfaces with the Class 1E power system, switchyard, transmission system, and alternate ac (AAC) source are described. This standard provides PPS requirements for nuclear power plants and guidance in the areas of AAC power source interfaces with PPS, physical independence of the PPS power and control circuits, and expanded PPS criteria for multi-unit stations.

**Keywords:** AAC, alternate ac source, Class 1E, IEEE 765, NPGS, nuclear power generating station, PPS, preferred power supply, switchyard, transmission system

IEEE prohibits discrimination, harassment, and bullying. For more information, visit <http://www.ieee.org/web/aboutus/whatis/policies/p9-26.html>.  
No part of this publication may be reproduced in any form, in an electronic retrieval system or otherwise, without the prior written permission of the publisher.

**Notice and Disclaimer of Liability Concerning the Use of IEEE Documents:** IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

Use of an IEEE Standard is wholly voluntary. IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon any IEEE Standard document.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained in its standards is free from patent infringement. IEEE Standards documents are supplied "AS IS."

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE standard is subjected to review at least every ten years. If a document is more than ten years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

**Translations:** The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

**Official Statements:** A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered the official position of IEEE or any of its committees and shall not be considered to be, nor be relied upon as, a formal position of IEEE. At conferences, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

**Comments on Standards:** Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important to ensure that any response to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. Any person who would like to participate in evaluating comments or revisions to an IEEE standard is welcome to join the relevant IEEE working group at <http://standards.ieee.org/develop/wg/>.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
Piscataway, NJ 08854  
USA

**Photocopies:** Authorization to photocopy portions of any individual standard for internal or personal use is granted by The Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

## Notice to users

### Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

### Copyrights

This document is copyrighted by the IEEE. It is made available for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making this document available for use and adoption by public authorities and private users, the IEEE does not waive any rights in copyright to this document.

### Updating of IEEE documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect. In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at <http://standards.ieee.org/index.html> or contact the IEEE at the address listed previously. For more information about the IEEE Standards Association or the IEEE standards development process, visit IEEE-SA Website at <http://standards.ieee.org/index.html>.

### Errata

Errata, if any, for this and all other standards can be accessed at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

## Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

## Participants

At the time this IEEE standard was completed, the Preferred Power Supply Working Group had the following membership:

**George Attarian, Chair**  
**David Gladey, Vice Chair**

Mark Bowman  
Robert Carruth  
Paul Colaianne  
John Disosway  
Ken Fleischer

Kali Hara  
Harvey Leake  
John Mallanda  
Kenneth Miller  
Gregg Reimers

David Sehi  
Shawn Simon  
Thomas Sims  
Michael Tucker  
Tamatha Womack

The Subcommittee on Auxiliary Power (SC4) of the Nuclear Power Engineering Committee that recommended approval of this IEEE standard had the following membership:

**Dale Goodney, Chair**  
**David Gladey, Vice Chair**

George Attarian  
John Bonner  
Mark Bowman  
Duane Brock  
Keith Bush  
Robert Carruth  
Jack Carter  
Richard Casalaina  
Om Chopra  
Paul Colaianne  
Richard Daverio  
Parthiv Desai  
John Disosway

Ken Fleischer  
Robert Fletcher  
Brian Gardes  
Kali Hara  
Evans Heacock  
Dirk Hopp  
Paul Johnson  
Joe Krvavac  
Harvey Leake  
Bruce Lord  
John MacDonald  
John Mallanda

Kenneth Miller  
Liliana Ramadan  
Gregg Reimers  
Bill Roettger  
David Sehi  
Shawn Simon  
Thomas Sims  
William Snider  
Robert Stark  
Sudhir Thakur  
James Thompson  
Michael Tucker  
Tamatha Womack

At the time this IEEE standard was submitted to the IEEE-SA Standards Board for approval, the Nuclear Power Engineering Committee (NPEC) had the following membership:

**Satish Aggarwal, Chair**  
**George Ballasi, Vice Chair**

Ijaz Ahmad  
Dheya Al-Othmany  
George Attarian  
Royce Beacom  
Mark Bowman  
Daniel Brosten  
Nissen Burster  
Keith Bush  
Robert Carruth  
Jack Carter  
Suresh Channarasappa  
Dennis Dellinger  
David Desaulniers  
John Disosway  
Walter Emerson  
Stephen Fleger  
Robert Fletcher  
Robert Francis

Robert Fuld  
David Gladey  
James Gleason  
Dale Goodney  
Robert Hall  
Kali Hara  
Daryl Harmon  
Dirk Hopp  
David Hrovath  
Paul Johnson  
Christopher Kerr  
Bok-Ryul Kim  
Thomas Koshy  
James Liming  
Bruce Lord  
John MacDonald  
Scott Malcolm

Michael Miller  
Edward Mohtashemi  
Yasushi Nakagawa  
James Parello  
Ted Riccio  
Mark Santschi  
Glen Schinzel  
Zdenko Simic  
Marek Tengler  
James Thomas  
Masafumi Utsumi  
Michael Waterman  
Edward Wenzinger  
John White  
Paul Yanosy Sr.  
Won Young Yun  
David Zaprazny  
Oon-Pyo Zhu

The following members of the individual balloting committee voted on this standard. Balloters may have voted for approval, disapproval, or abstention.

William Ackerman  
Satish Aggarwal  
George Attarian  
George Ballassi  
Farouk Baxter  
Robert Beavers  
William Bloethe  
Mark Bowman  
Daniel Brosnan  
Nissen Burstein  
Keith Bush  
William Byrd  
Suresh Channarasappa  
Weijen Chen  
Preston Cooper  
John Disosway  
Stephen Fleger  
Robert Fletcher

Dale Goodney  
Randall Groves  
Ajit Gwal  
Kuljit Hara  
Hamidreza Heidarisafo  
Werner Hoelzl  
Lindsey Hopf  
William Hopf  
Paul Johnson  
Wayne Johnson  
Chad Kiger  
Joseph L. Koepfinger  
Robert Konnik  
Jim Kulchisky  
G. Lang  
Michael Lauxman  
Bruce Lord  
Greg Luri  
John Macdonald

Donald Mccullough  
John Merando  
Michael S. Newman  
Mirko Palazzo  
Jan Pirrong  
Ted Riccio  
Bartien Sayogo  
Glen Schinzel  
Gil Shultz  
Robert Stark  
Gary Stoedter  
Ashley Taylor  
Michael Tucker  
John Vergis  
Kenneth White  
James Wilson  
Tamatha Wood  
Larry Young

When the IEEE-SA Standards Board approved this standard on 7 December 2012, it had the following membership:

**Richard H. Hulet**, *Chair*  
**John Kulick**, *Vice Chair*  
**Robert M. Grow**, *Past Chair*  
**Konstantinos Parachalios**, *Secretary*

Satish Aggarwal  
Masayuki Ariyoshi  
Peter Balma  
William Bartley  
Ted Burse  
Clint Chaplin  
Wael Diab  
Jean-Philippe Faure

Alexander Freeman  
Paul Groves  
Jim Hughes  
Joseph L. Koepfinger\*  
David J. Law  
Thomas Lee  
Hung Ling  
Oleg Logvinov

Ted Olsen  
Gary Robinson  
Jon Walter Rosdahl  
Sam Sciacca  
Mike Seavey  
Yatin Trivedi  
Phil Winston  
Don Wright

\*Member Emeritus

Also included were the following nonvoting IEEE-SA Standards Board liaisons:

Richard DeBlasio, *DOE Representative*  
Michael Janezic, *NIST Representative*

Patrick Gibbons  
*IEEE Standards Program Manager, Document Development*

Malia Zaman  
*IEEE Standards Program Manager, Technical Program Development*

## Introduction

This introduction is not part of IEEE Std 765-2012, IEEE Standard for Preferred Power Supply (PPS) for Nuclear Power Generating Stations (NPGS).

This standard was originally prepared to provide detailed design criteria for the preferred power supply (PPS) to ensure a design commensurate with its intended function and to provide sufficient detail to interpret, clarify, and expand on guidance given in Title 10, U.S. Code of Federal Regulations, Part 50 [B1], Appendix A, General Design Criteria 17 and General Design criteria 18, and IEEE Std 308<sup>TM</sup>-1991.

Title 10, U.S. Code of Federal Regulations, Part 50 (10CFR50), Appendix A, General Design Criteria 17 (GDC-17) for nuclear power generating stations requires that an offsite electric power system be provided to permit functioning of structures, systems, and components important to safety. In addition, General Design Criteria 18 (GDC-18) provides requirements for inspection and testing of electric power systems.

In 1988, Title 10, Part 50.63 was added to the U.S. Code of Federal Regulations. Part 50.63 requires each light water-cooled nuclear power generating station to withstand a station blackout for a specific duration and to recover from it. In addition, Part 50.63 defines the requirements for coping with a station blackout by utilizing an alternate ac (AAC) power source.

The Nuclear Utility Management and Resource Council (NUMARC) provided additional guidance in NUMARC 87-00-1988, Guidelines and Technical Bases for NUMARC Initiatives Addressing Station Blackout at Light Water Reactors. Since NUMARC 87-00 (Revision August 1991) is not available for general public distribution, the guidelines contained therein were considered by the Working Group. The design requirements of AAC are outside the scope of this standard.

This revision of the standard has removed Annex A and Annex B. Reference is made to IEEE Std 1792<sup>TM</sup>-2011, which provides a more comprehensive discussion of topics related to PPS reliability.

# IEEE Standard for Preferred Power Supply (PPS) for Nuclear Power Generating Stations (NPGS)

*IMPORTANT NOTICE: IEEE Standards documents are not intended to ensure safety, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.*

*This IEEE document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.*

## 1. Overview

### 1.1 Document Organization

This standard has seven clauses. The first clause defines the scope of this standard, Clause 2 provides references, and Clause 3 provides definitions that are not found in other standards or are essential to the interpretation of the intent of this standard.

The general design criteria of the preferred power supply (PPS) are outlined in Clause 4, and the specific design criteria in Clause 5 describe the interfaces with the transmission system, switchyard, Class 1E power system, and alternate ac (AAC) source. Clause 6 describes the surveillance and test requirements, and Clause 7 describes multi-unit considerations.

### 1.2 Scope

This standard describes the design criteria of the PPS and its interfaces with the Class 1E power system, switchyard, transmission system, and AAC source. Figure 1 is a typical interface diagram of the PPS with related power systems.

Figure 1—PPS interface diagram

### 1.3 Purpose

This standard provides PPS requirements for nuclear power generating stations (NPGSs) and guidance in the areas of AAC power source interfaces with the PPS, physical independence of the PPS power and control circuits, and expanded PPS criteria for multi-unit stations.

## 2. Normative references

The following referenced documents are indispensable for the application of this document (i.e., they must be understood and used, so each referenced document is cited in text and its relationship to this document is explained). For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments or corrigenda) applies.

IEEE Std 308<sup>TM</sup>, IEEE Standard Criteria for Class 1E Power Systems for Nuclear Power Generating Stations.<sup>1,2</sup>
