**Abstract:** This guide consolidates most electric utility power industry practices, accepted theories, existing standards/guides, definitions, and technical references as they specifically pertain to surge protection of electric power generating plants. Where technical information is not readily available, guidance is provided to aid toward proper surge protection and to reduce interference to communication, control, and protection circuits due to surges and other overvoltages. It has to be recognized that this application guide approaches the subject of surge protection from a common or generalized application viewpoint. Complex applications of surge protection practices may require specialized study by experienced engineers.

**Keywords:** electric utilities, electric power, electric generating plants, generating plants, IEEE C62.23™, power plants, surge protection

## Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notices and Disclaimers Concerning IEEE Standards Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

### Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. IEEE Standards are documents developed through scientific, academic, and industry-based technical working groups. Volunteers in IEEE working groups are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE Standards do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers and users of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change from time to time about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

## Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

## Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, conferences, and educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

## Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
Piscataway, NJ 08854 USA

## Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

## Copyrights

IEEE draft and approved standards are copyrighted by IEEE under US and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

## Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

## Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. A current IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every 10 years. When a document is more than 10 years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE Explore at <http://ieeexplore.ieee.org/> or contact IEEE at the address listed previously. For more information about the IEEE-SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

## Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

## Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patent Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

## Participants

At the time this IEEE guide was completed, the High-Voltage Surge Protection of Generating Plants Working Group had the following membership:

**Robert L. Allison, *Chair***  
**Rusty Robbins, *Vice Chair***

Robert Allison	Ronald Hotchkiss	Russell Robbins
Senthil Asok Kumar	Adria Jones	Thomas Rozek
Thomas Barnes	Jim Kulchisky	Ryandi Ryandi
William Bloethe	Christopher Kulig	Steven Sano
Kenneth Bow	Benjamin Lanz	Bartien Sayogo
Demetrio Bucaneg	Albert Livshitz	Carl Schuetz
Jose Cabrera	Lawrenc Long	Hyeong Sim
Michael Champagne	Michael Maytum	Jeremy Smith
Arvind Chaudhary	John McClelland	Gary Smullin
Danila Chernetsov	James Michalec	Andrew Steffen
Robert Christman	Michael Newman	K. Stump
Matthew Davis	Hans-Wo Oertel	Truth Truth Tran
Patrick Di Lillo	Lorraine Padden	Paul Valquez
Gary Donner	Mirko Palazzo	John Wang
Jorge Fernandez Daher	Bansi Patel	Jinyi Wang
Thomas Field	Shawn Patterson	Steven Whisenant
Dale Fredrickson	Branimir Petosic	James Wilson
Randall Groves	Christopher Petrola	Chad Withers
Steven Hensley	Jan Pirrong	Jonathan Woodworth
Werner Hoelzl	Michael Ramarge	Ahmed Zobaa

The following members of the individual balloting committee voted on this guide. Balloters may have voted for approval, disapproval, or abstention.

William Ackerman	Ajit Ghar	Christopher Petrola
Saleman Alibhay	Steven Hensley	Jan Pirrong
Thomas Barnes	Lee Herron	Alvaro Portillo
William Bloethe	Raymond Hill	Iulian Profir
Kenneth Bow	Werner Hoelzl	Charles Rogers
Derek Brown	Yuri Khersonsky	Thomas Rozek
Gustavo Brunello	Chad Kiger	Ryandi Ryandi
William Bush	Jim Kulchisky	Steven Sano
William Byrd	Christopher Kulig	Bartien Sayogo
Paul Cardinal	Chung-Yiu Lam	Carl Schuetz
Michael Champagne	Albert Livshitz	Jeremy Smith
Suresh Chinnarasappa	Lawrence Long	Gary Smullin
Arvind Chaudhary	Michael Maytum	Andrew Steffen
Robert Christman	Omar Mazzoni	K. Stump
Stephen Conrad	John McClelland	James Timperley
Matthew Davis	James Michalec	John Vergis
Gary Donner	Jerry Murphy	John Wang
Jorge Fernandez Daher	R. Murphy	Daniel Ward
Rostyslaw Fostiak	Michael Newman	Steven Whisenant
Dale Fredrickson	Lorraine Padden	Kenneth White
Jalal Gohari	Bansi Patel	James Wilson
Randall Groves	Shawn Patterson	Jian Yu
	Branimir Petosic	

When the IEEE-SA Standards Board approved this guide on 6 December 2017, it had the following membership:

**Jean-Phillipe Faure**, *Chair*  
**Gary Hoffman**, *Vice Chair*  
**John D. Kulick**, *Past Chair*  
**Konstantinos Karachalios**, *Secretary*

Chuck Adams  
Masayuki Ariyoshi  
Ted Burse  
Stephen Dukes  
Doug Edwards  
J. Travis Griffith  
Michael Janezic

Thomas Koshy  
Joseph L. Koepfinger\*  
Kevin Lu  
Daleep Mohla  
Damir Novosel  
Ronald C. Petersen  
Annette D. Reilly

Robby Robson  
Dorothy Stanley  
Adrian Stephens  
Mehmet Ulema  
Phil Wennblom  
Howard Wolfman  
Yu Yuan

\*Member Emeritus

## Introduction

This introduction is not part of IEEE Std C62.23-2017, IEEE Application Guide for Surge Protection of Electric Generating Plants.

The need for an application guide for surge protection of electric generating plants was indicated in 1979 when the US Nuclear Regulatory Commission published a draft regulatory guide and value/impact statement entitled, “Lightning Protection for Nuclear Power Plants.”

After meetings between members of the IEEE Power and Energy Society’s Surge Protective Devices Committee and members of the US Nuclear Regulatory Commission, it was agreed that the task of writing an application guide for the surge protection of electric generating plants would be performed by a specially assigned working group of the IEEE Surge Protective Devices Committee.

The first function of this working group was to publish a bibliography containing many standards and technical papers pertaining to the protection of all elements inside a power plant complex. The “Bibliography on Power Generating Plants Surge Protection” was published in *IEEE Transactions on Power Delivery*, 1991.<sup>1</sup>

The working group also decided that nuclear power plants should be included among the electric generating plants covered by this application guide. Furthermore, because the method of surge protection applies to nuclear as well as all other electric generating plants, no special differentiation should be made.

The first version of this application guide was published in 1999 as the result of efforts of the working group over more than 10 years. The working group is part of the application of the Surge Protective Devices Subcommittee, which is sponsored by the Surge Protective Devices Committee of the IEEE Power and Energy Society. Comments were also solicited from the following committees:

- IEEE Power and Energy Society
  - Transmission and Distribution Committee
  - Power System Relaying Committee
  - Nuclear Power Engineering Committee
  - Substations Committee
  - Power System Communications Committee
  - Energy Development and Power Generation Committee
  - Electric Machinery Committee
- IEEE Industry Applications Society’s Power Systems Engineering Committee

In the 2017 edition, the working group

- Updated the organization of [Clause 1](#) so the overview conforms to IEEE’s current presentation of a standard’s overall scope and purpose as well as its contents and context.
- Removed the edition dates associated with active references to assure that the latest edition always applies.
- Added in [4.2.2.2](#) an example of a comparison of the insulator voltage stress for a shielded line versus an unshielded line.

# IEEE Application Guide for Surge Protection of Electric Generating Plants

## 1. Overview

### 1.1 Scope

This application guide covers surges entering an electric generating plant via transmission and distribution lines and methods to reduce them as well as methods of protecting indoor and outdoor equipment, controls, and communication systems within the plant switchyard, the plant proper, and ancillary facilities within the premises (such as fuel, ash, water, cooling, weather and warning systems) against direct strokes, incoming surges, and internally generated surges.

### 1.2 Purpose

This application guide aids engineers at all levels of surge protection knowledge to decide whether particular generating plants or parts of plants should have surge protection. The guide may be used in estimating the lightning surge and switching surge exposure of electric generating plants in usual, not extreme, exposures. For plants or parts of plants that should be protected, the purpose of this document is to provide guidance in selecting and applying surge protective devices (SPDs).

### 1.3 Contents and context

This application guide consolidates most electric utility power industry practices, accepted theories, existing standards/guides, definitions, and technical references as they specifically pertain to surge protection of electric power generating plants. Where technical information is not readily available, guidance is provided to aid toward proper surge protection and to reduce interference to communication, control, and protection circuits due to surges and other overvoltages. It has to be recognized that this application guide approaches the subject of surge protection from a common or generalized application viewpoint. Complex applications of surge protection practices may require specialized study by experienced engineers.

Surge overvoltages can cause equipment damage, system malfunction, or power interruptions at electric power generating plants if plants are not adequately protected against them. Excessive surge voltages have to, therefore, be controlled or reduced to permissible levels. These overvoltage surges in power generating plants may be generated by lightning or by system events such as switching, faults, load rejections, or by some combinations of these.
