## Foreword

This translation has been made based on the original Japanese Industrial Standard revised by the Minister of Economy, Trade and Industry, through deliberations at the Japanese Industrial Standards Committee as the result of proposal for revision of Japanese Industrial Standard submitted by The Japan Iron and Steel Federation (JISF) with the draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law applicable to the case of revision by the provision of Article 14.

Consequently, **JIS G 0404:2010** is replaced with this Standard.

This **JIS** document is protected by the Copyright Law.

Attention is drawn to the possibility that some parts of this Standard may conflict with patent rights, applications for a patent after opening to the public or utility model rights. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying any of such patent rights, applications for a patent after opening to the public or utility model rights.

# Steel and steel products—General technical delivery requirements

## Introduction

This Japanese Industrial Standard has been prepared based on the third edition of **ISO 404** published in 2013 with some modifications of the technical contents.

The portions given dotted underlines are the matters in which the contents of the corresponding International Standard have been modified. A list of modifications with the explanations is given in Annex JA.

## 1 Scope

This Standard specifies the general technical delivery requirement for steel and steel products as defined in **JIS G 0203** with the exception of steel forgings/castings and powder metallurgical products.

Where the delivery requirements agreed at the time of ordering or those specified in the product standard differ from the requirements specified in this Standard, then it is the requirements agreed for ordering or specified in the product standard that apply.

NOTE: The International Standard corresponding to this Standard and the symbol of degree of correspondence are as follows.

ISO 404:2013 *Steel and steel products—General technical delivery requirements* (MOD)

In addition, symbols which denote the degree of correspondence in the contents between the relevant International Standard and **JIS** are **IDT** (identical), **MOD** (modified), and **NEQ** (not equivalent) according to **ISO/IEC Guide 21-1**.

## 2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this Standard. The most recent editions of the standards (including amendments), listed below shall be applied.

JIS G 0203 *Glossary of terms used in iron and steel (Products and quality)*

JIS G 0390 *Standard test method for heat analysis of steel products*

JIS G 0391 *Product analysis and its tolerance for wrought steel*

JIS G 0415 *Steel and steel products—Inspection documents*

JIS G 0416 *Steel and steel products—Location and preparation of samples and test pieces for mechanical testing*

JIS G 0417 *Steel and iron—Sampling and preparation of samples for the determination of chemical composition*

JIS Q 9001 *Quality management systems—Requirements*

NOTE: Corresponding International Standard: ISO 9001 *Quality management systems—Requirements* (IDT)
