

Coating Technical File in Accordance with the IMO Performance Standard for Protective Coatings

This NACE International standard represents a consensus of those individual members who have reviewed this document, its scope, and provisions. Its acceptance does not in any respect preclude anyone, whether he or she has adopted the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not in conformance with this standard. Nothing contained in this NACE International standard is to be construed as granting any right, by implication or otherwise, to manufacture, sell, or use in connection with any method, apparatus, or product covered by Letters Patent, or as indemnifying or protecting anyone against liability for infringement of Letters Patent. This standard represents minimum requirements and should in no way be interpreted as a restriction on the use of better procedures or materials. Neither is this standard intended to apply to all cases relating to the subject. Unpredictable circumstances may negate the usefulness of this standard in specific instances. NACE International assumes no responsibility for the interpretation or use of this standard by other parties and accepts responsibility for only those official NACE International interpretations issued by NACE International in accordance with its governing procedures and policies which preclude the issuance of interpretations by individual volunteers.

Users of this NACE International standard are responsible for reviewing appropriate health, safety, environmental, and regulatory documents and for determining their applicability in relation to this standard prior to its use. This NACE International standard may not necessarily address all potential health and safety problems or environmental hazards associated with the use of materials, equipment, and/or operations detailed or referred to within this standard. Users of this NACE International standard are also responsible for establishing appropriate health, safety, and environmental protection practices, in consultation with appropriate regulatory authorities if necessary, to achieve compliance with any existing applicable regulatory requirements prior to the use of this standard.

CAUTIONARY NOTICE: NACE International standards are subject to periodic review and may be revised or withdrawn at any time in accordance with NACE technical committee procedures. NACE International requires that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of initial publication and subsequently from the date of each reaffirmation or revision. The user is cautioned to obtain the latest edition. Purchasers of NACE standards may receive current information on all standards and other NACE publications by contacting the NACE FirstService Department, 15835 Park Ten Place, Houston, TX 77084-5145 (tel: +1 281-228-6200, email: firstservice@nace.org).

ABSTRACT

The coating technical file (CTF) contains documentation relevant to the selection, specification, installation, and inspection of coatings applied to a ship's seawater ballast tanks and double-skin spaces. It also contains documentation of in-service maintenance and repair of coating system(s). These requirements originate in the International Maritime Organization (IMO)'s⁽¹⁾ "Performance Standard for Protective Coatings for Dedicated Seawater Ballast Tanks in All Types of Ships and Double-Side Skin Spaces of Bulk Carriers" (PSPC),¹ Paragraph 3.4, Coating Technical File (CTF).

KEYWORDS

Foreword

The coating technical file (CTF) contains documentation relevant to the selection, specification, installation, and inspection of coatings applied to a ship's seawater ballast tanks and double-skin spaces. It also contains documentation of in-service maintenance and repair of coating system(s). These requirements originate in the International Maritime Organization (IMO)'s "Performance Standard for Protective Coatings for Dedicated Seawater Ballast Tanks in All Types of Ships and Double-Side Skin Spaces of Bulk Carriers" (PSPC),¹ Paragraph 3.4, Coating Technical File (CTF).

This standard is intended for use by parties responsible for the construction of ships in compliance with IMO Resolution MSC.215(82).²

The benefits of the extensive documentation process requirements are twofold. The first is to ensure the coating system(s) is properly installed; the documentation serves as a quality control (QC)/quality assurance (QA) process. The second is to provide important historical data on the new-build's coating system(s) installation for future reference and provide a documentation system for ongoing maintenance and repair of coating system(s). The coating system's historical information is best collected and presented with an efficient information access system during the lifetime of the ship.

This standard was prepared by NACE Task Group 402, "PSPC Coating Technical File Standard Practice," which is administered by Specific Technology Group (STG) 44, "Marine Corrosion: Ships and Structures." It is cosponsored by STG 02, "Coatings and Linings, Protective—Atmospheric," STG 03, "Coatings and Linings, Protective—Immersion and Buried Service," and STG 04, "Coatings and Linings, Protective—Surface Preparation." This standard is published by NACE under the auspices of STG 44.

In NACE standards, the terms **shall**, **must**, **should**, and **may** are used in accordance with the definitions of these terms in the NACE Publications Style Manual. The terms **shall** and **must** are used to state a requirement, and are considered mandatory. The term **should** is used to state something good and is recommended, but is not considered mandatory. The term **may** is used to state something considered optional.
