## NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

NEMA standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications. NEMA disclaims liability for any personal injury, property, or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health- or safety-related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

## Foreword

This guide was developed by the Motor and Generator Section and the Industrial Automation Control Products and Systems Section and approved for publication as an application guide of the National Electrical Manufacturers Association. This guide is intended to assist users in the proper selection and application of AC adjustable speed drive systems. The guide is revised periodically to provide for changes in user needs, advances in technology, and changing economic trends. All persons having experience in the selection, use, or manufacture of electric motors and adjustable speed drives are encouraged to submit recommendations that will improve the usefulness of this guide. Inquiries, comments, and proposed or recommended revisions should be submitted to the Motor and Generator Section and the Industrial Automation Control Products and Systems Section by contacting:

NEMA Technical Operations Department  
National Electrical Manufacturers Association  
1300 North 17<sup>th</sup> Street, Suite 900  
Rosslyn, VA 22209

The best judgment of the Motor and Generator Section and the Industrial Automation Control Products and Systems Section on the performance and construction of adjustable speed drive systems is represented in this guide. The guide is based upon sound engineering principles, research, and records of test and field experience. Also involved is an appreciation of the problems of manufacture, installation, and use derived from consultation with and information obtained from manufacturers, users, inspection authorities, and others having specialized experience. For systems intended for general applications, the individual companies through normal commercial contact determined information as to user requirements. Practical information concerning performance, safety, test, construction, and manufacture of adjustable speed drive systems is provided in this guide.

In the preparation and revision of these standards, consideration has been given to the work of other organizations whose standards are in any way related to adjustable speed drive systems. Credit is hereby given to all whose standards may have been helpful in the preparation of this volume.

This application guide was developed jointly by the Industrial Automation Control Products and Systems Section and the Motor and Generator Section. Section approval of the guide does not necessarily imply that all section members voted for its approval or participated in its development. At the time this guide was approved, the Industrial Automation Control Products and Systems Section was composed of the following members:

ABB Inc.—Cary, NC  
CARLO GAVAZZI, INC.—Buffalo Grove, IL  
Cummins, Inc.—Minneapolis, MN  
Danfoss VLT Drives—Loves Park, IL  
Delta Products Corporation—Research Triangle Park, NC  
Eaton—Menomonee Falls, WI  
Electric Switch Corporation—Weymouth, MA  
Elliott Control Company, Ltd.—Willis, TX  
Emerson Electric Co.—St. Louis, MO  
Edison Electric Corporation—Edison, NJ  
Gen-Trac Power Systems, Inc.—Waukesha, WI  
Hubbell Incorporated—Shelton, CT  
Hypertherm Incorporated—Hanover, NH  
Legrand North America—New London, CT  
Master Control Systems, Inc.—Lake Bluff, IL  
Mitsubishi Electric Automation, Inc.—Vernon Hills, IL  
Nidec Motor Corporation—St. Louis, MO  
Phoenix Contact, Inc.—Middletown, PA

Post Glover Resistors, Inc.—Erlanger, KY  
Reliance Controls Corporation—Racine, WI  
Rockwell Automation—Milwaukee, WI  
Schneider Electric—Andover, MA  
SEW-Eurodrive, Inc.—Lyman, SC  
Siemens Industry, Inc.—Norcross, GA  
TE Connectivity—Harrisburg, MA  
TECO-Westinghouse Motor Company—Round Rock TX  
Toshiba International Corporation—Houston, TX  
Turntide Technologies—Sunnyvale, CA  
WAGO Corporation—Germantown, WI  
Weidmuller Inc.—Richmond, VA  
WorldWide Electric Corporation—Rochester, NY  
Yaskawa America, Inc.—Waukegan, IL

## **Section 1**

### **Scope**

This guide covers AC electrical drive systems, rated 600 volts or less, consisting of three-phase induction motors, voltage-source pulse-width modulated adjustable frequency controls, and associated components. The guide addresses common issues that should be considered in the selection of drive system components and the installation and application of the drive system.
