NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

The National Electrical Manufacturers Association (NEMA) standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information, or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no warranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guideline.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety-related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

Foreword

This standard is intended to identify key features of fixed X-ray interventional equipment that:

- contribute to optimize patient care; or
- help to perform optimization and/or management of doses of ionizing radiations while still enabling the system to deliver sufficient image quality needed by the physician.

Note: Examples of interventional X-ray equipment for which this standard is intended include prolonged neuro and cardiovascular procedures as indicated in the annex AA of IEC 60601-2-43:2010.

The Interventional Fluoroscopy Working Group, MITA, and NEMA as a whole convey their determination and commitment to help ensure that clinicians have the tools needed to manage the amount of radiation that is used during extended interventional X-ray procedures.

This standard can enable the designated individuals of the health facilities responsible for maintaining the risk management of the interventional X-ray rooms to evaluate how their equipment manufactured at a given date is positioned regarding the key dose management features specified in this standard. They should take these factors into consideration when performing risk management evaluations on existing equipment.

This standard was developed by the Interventional Fluoroscopy Working Group of the X-Ray Imaging Section of the Medical Imaging & Technology Alliance (MITA), a division of NEMA. Inquiries, comments, and proposed or recommended revisions should be submitted to the X-Ray Imaging Section by contacting:

Executive Director
Medical Imaging & Technology Alliance (MITA)
1300 North 17th Street, Suite 900
Rosslyn, Virginia 22209

At the time of the approval of the standard, the Interventional Fluoroscopy Working Group was composed of the following members:

Canon Medical Systems USA
GE HealthCare
Philips Healthcare
Siemens Healthineers

At the time of the approval of the standard, the X-Ray Imaging Section was composed of the following members:

Agfa HealthCare
Canon Medical Systems USA
Capintec, Inc.
CIRS
Ei, O Corporation
ECS imaging
FUJIFILM Medical Systems U.S.A., Inc.
GE HealthCare
Hitachi Medical Systems America, Inc.
Hologic Inc.
IMRIS
Konica Minolta Medical Imaging USA, Inc.
MEDIAN Technologies, Inc.
Medtronic, Inc.

NeuroLogica Corporation
Neusoft Medical Systems, USA, Inc.
Philips Healthcare
Shimadzu Medical Systems USA
Siemens Healthineers
The Phantom Laboratory
Ziehm Imaging, Inc.

History

The first edition of this standard, NEMA XR 31-2016 *Standard Attributes on X-Ray Equipment for Interventional Procedures*, identified state of the art attributes for fixed X-ray interventional equipment indicated for prolonged X-ray procedures (e.g., neuro and cardiovascular procedures as indicated in the annex AA of IEC 60601-2-43:10).

This is the first revision to NEMA XR 31-2016; it adds additional attributes that have become state of the art since publication of the first edition.

Section 1 Overview

1.1 Scope

This standard identifies state of the art fixed X-ray interventional equipment attributes that:

- a. contribute to optimize patient care;
- b. or help optimize/manage doses of ionizing radiation while still enabling the system to deliver the image quality needed by the clinician.

1.2 Normative References

By reference herein the following normative documents are adopted, in whole or in part, as indicated in this technical publication.

International Electrotechnical Commission

1.3 Conventions

The verbal forms used in this standard conform to usage described in Annex H of the ISO/IEC Directives, Part 2. For the purposes of this standard, the auxiliary verb:

- a. "Shall" means that compliance with a requirement or a test is mandatory for compliance with this standard.
- b. "Should" means that compliance with a requirement or a test is recommended but is not mandatory for compliance with this standard.
- c. "May" is used to describe a permissible way to achieve compliance with a requirement or test.

Terms and abbreviations used throughout this standard that have been defined in clause 1.4 are in bold italics.

Acceptance criteria used throughout this standard are in italics in the standard.
