NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

The National Electrical Manufacturers Association (NEMA) standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety-related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

Foreword

This NEMA technical publication, TS 40008-2023 *Cyber and Physical Security for Intelligent Transportation Systems (ITS)*, was developed to meet the needs for security in the traffic control and ITS industries.

In the preparation of NEMA TS 40008-2023, input of users and other interested parties has been sought and evaluated. Inquiries, comments, and proposed or recommended revisions should be submitted to the concerned NEMA product subdivision by contacting:

NEMA Technical Operations Department
National Electrical Manufacturers Association
1300 North 17th Street, Suite 900
Rosslyn, Virginia 22209

The NEMA 3TS Cybersecurity Working Group developed NEMA TS 40008-2023 under the auspices of the NEMA Transportation Management Systems and Associated Control Devices Section (3TS), of which it is a part. The following companies and their representatives were members of the working group:

ASSA ABLOY	Guerry Bruner (Chair)
Applied Information, Inc.	Walt Townsend
Daktronics	Steve Bostrom
Eberle Design, Inc.	Ethan Coxsey
Parsons	Russ Brookshire
Qualcomm	Drew Van Doren, William Whyte
Skyline Products	James Banhart, Pat Cochran
Ver-Mac Inc.	Serge Beaury
Yunex Traffic	Jonathan Grant, Dave Miller, Andrew Valdez

3TS section approval of NEMA TS 40008-2023 does not necessarily imply that all 3TS section members voted for its approval or participated in its development. When NEMA TS 40008-2023 was approved, the Transportation Management Systems and Associated Control Devices Section was composed of the following members:

ASSA ABLOY	www.assaabloy.com/group/en
Applied Information, Inc.	appinfoinc.com
Daktronics, Inc.	www.daktronics.com/en-us
Eberle Design, Inc.	www.editraffic.com
John Thomas, Inc.	www.jittraffic.com
Parsons Corporation	delcantechologies.com
Qualcomm	www.qualcomm.com/home
Skyline Products, Inc.	www.skylineproducts.com
Sunrise SESA Technologies, Inc	sesa.sunrisesesatech.com
Temple, Inc.	temple-inc.com
Ver-Mac Inc.	www.ver-mac.com

Section 1 General

1.1 Summary

NEMA TS 40008 (previously known as TS 8), this standard, is designed to allow agencies and other transportation infrastructure owners to implement security of surface transportation electronic systems. The goal is to allow, using NEMA TS 40008, security to be implemented on both existing legacy systems, as well as new and planned future systems.

The security requirements proposed are designed to be practical to implement, and not place an excessive burden on agencies and implementers of transportation systems.

No security measures can ever be perfect and provide 100% security. The measures and requirements of NEMA TS 40008 provide a reasonable balance between the security needs and the reasonable needs to have transportation systems continue to function without requiring wholesale changes to the equipment, processes, and practices of the transportation community.

1.2 Scope

NEMA TS 40008 defines functional cybersecurity attributes along with minimum performance baselines that owners and operators of critical infrastructure transportation systems can use for procurement purposes. NEMA TS 40008 addresses the following products:

- a) Signal display and signal elements, e.g., signal heads, pedestrian displays, and dynamic message signs (DMS).
- b) Fixed, configurable, and programmable traffic controllers and associated cabinet devices, including traffic controllers, conflict monitors (e.g., M²U, CMU), ramp meters, and auxiliary devices.
- c) Communications interface devices and systems, e.g., National Transportation Communications for Intelligent Transportation System Protocol (NATCIP) interface units, and other communication interface devices.
- d) Software and firmware modules, e.g., application system software, and Transportation Management Center (TMC) software.
- e) Mounting, protection, power supply, and fastening equipment, e.g., cabinets and enclosures.
- f) Computing assemblies for transportation management systems, e.g., incident monitoring and reporting stations and toll collection and management stations.
- g) Associated devices for transportation system management control devices, e.g., automatic vehicle location devices, weigh-in-motion systems, and detection devices such as loop detectors, traffic cameras, and ultrasonic sensors.

The security of other elements of a complete Intelligent Transportation System (ITS), such as communications networks, is outside the scope of NEMA TS 40008.

NEMA TS 40008 addresses the following areas of concern: physical security, local access security, communications security (between field and central system), and central system security.

For each of these areas, NEMA TS 40008 identifies potential threat areas and the severity of their consequences, prevention and mitigation techniques that manufacturers can use to minimize their impacts, and methods to effectively rate security performance.
