Substantial effort has been made to ensure that all data and information in this Recommended Practices manual are accurate. However, PCI cannot accept responsibility for any errors or oversights in the use of material or in the preparation of engineering plans. This publication is intended for use by professional personnel competent to evaluate the significance and limitations of its contents and able to accept responsibility for the application of the material it contains. Special conditions on a project may require more specific evaluation and practical engineering judgment.

1.0 INTRODUCTION	1-1
1.1 General	1-1
1.2 Aesthetics	1-2
1.3 Functional Design	1-3
1.4 Durability.....	1-4
1.5 Sustainability	1-4
1.6 Structural Framing Systems	1-5
1.7 Construction.....	1-6
1.8 Maintenance	1-6
1.9 Research and Technical Support	1-7
2.0 PARKING STRUCTURE FUNCTIONAL DESIGN.....	2-1
2.1 Introduction	2-1
2.2 Types of Parking Structures.....	2-1
2.2.1 Operational Types.....	2-1
2.2.2 Building Code Classification.....	2-2
2.2.3 Mixed-Use Parking Structures.....	2-4
2.3 Revenue Control/ Operating Systems	2-5
2.3.1 Transient or Hourly Parking	2-5
2.3.2 Monthly Contact Parking	2-5
2.3.3 Cashiering.....	2-6
2.4 Street Access Design.....	2-7
2.4.1 Entrances	2-7
2.4.2 Exits.....	2-9
2.5 Floor-to-Ceiling Clearance	2-9
2.6 Circulation and Ramping.....	2-10
2.7 Parking Configuration.....	2-14
2.7.1 Level of Service.....	2-15
2.7.2 Parking Geometrics	2-16
2.8 Accessible Parking	2-19
2.8.1 Accessible Space Layout and Identification.....	2-19
2.8.2 Van Accessible Spaces.....	2-20

2.9 Pedestrian Circulation	2-21
2.10 Safety and Security	2-22
2.10.1 Passive Security	2-22
2.10.2 Active Security	2-23
2.11 Lighting	2-24
2.11.1 Lighting Design Criteria	2-24
2.11.2 Fixture Selection.....	2-25
2.11.3 Light Source Selection	2-26
2.11.4 Fixture Placement.....	2-27
2.11.5 Electrical Equipment Room	2-28
2.12 Wayfinding, Signage, and Graphics	2-29
2.12.1 Introduction	2-29
2.12.2 Wayfinding.....	2-29
2.12.3 Signage	2-29
2.12.4 Graphics.....	2-32
2.12.5 Pavement Markings	2-32
2.13 Other Items to Consider.....	2-33
2.13.1 Fire Protection	2-33
2.13.2 Physical Hazards	2-34
2.13.3 Vehicle Barriers and Pedestrian Guards	2-34
2.14 Sustainability.....	2-34
2.15 Summary.....	2-35
3.0 DURABILITY CONSIDERATIONS	3-1
3.1 Introduction	3-1
3.2 Durability Factors	3-1
3.3 Airborne Deterioration Mechanisms	3-6
3.4 Designing for Durability	3-6
3.4.1 Concrete Quality.....	3-7
3.4.1.1 Deck Surfaces.....	3-8
3.4.1.2 Finishing.....	3-9
3.4.1.3 Curing.....	3-9
3.4.2 Drainage	3-9
3.4.2.1 Drains	3-11
3.4.3 Concrete Cover	3-11
3.4.4 Concrete Surface Sealers.....	3-12
3.4.4.1 Penetrating Sealers	3-12

Table of Contents

3.4.4.2	Non-penetrating Sealers	3-13
3.4.4.3	Geographic Considerations	3-13
3.4.5	Crack Prevention, Control Joints and Isolation Joints.....	3-13
3.4.5.1	Construction and Control Joints.....	3-14
3.4.5.2	Isolation Joints.....	3-14
3.4.6	Additional Durability Measures	3-14
3.4.6.1	Epoxy-Coated Reinforcement	3-14
3.4.6.2	Traffic-Bearing Membranes	3-15
3.4.6.3	Corrosion Inhibitors	3-16
3.4.6.4	High Performance Concrete	3-17
3.4.6.5	Protection for Precast Connections	3-17
3.4.6.6	Precast Stair Units	3-17
3.4.6.7	Electrical Accessories.....	3-17
3.5	Joint Sealants	3-18
3.5.1	Joint Sealant Material Selection	3-18
3.5.2	Joint Design.....	3-19
3.5.3	Surface Preparation	3-20
3.5.3.1	Pretopped systems	3-20
3.5.3.2	Field-topped systems.....	3-20
3.6	Joint Connections.....	3-20
3.6.1	Installation of Connectors.....	3-21
3.6.2	Welding of Connectors	3-22
3.7	Maintenance Program	3-23
3.8	Durability Considerations Summary	3-23
4.0	SUSTAINABILITY.....	4-1
4.1	Principles	4-1
4.1.1	Sustainable Parking Structures	4-1
4.1.2	Strategies for Sustainable Parking Structures.....	4-1
4.1.3	Precast Concrete Systems as Sustainable Products.....	4-3
4.1.5	Definitions and Terminology	4-6
5.0	STRUCTURAL DESIGN.....	5-1
5.1	Introduction	5-1
5.2	Gravity and Vehicle Impact Loads.....	5-1
5.2.1	Dead Loads.....	5-1
5.2.2	Live Loads	5-2
5.2.2.1	Uniform Load.....	5-2

Table of Contents

5.2.2.2	Concentrated Load	5-2
5.2.2.3	Load on Vehicle Barrier Systems	5-2
5.2.2.4	Special Vehicle Loading	5-3
5.2.2.5	Snow Load.....	5-3
5.3	Lateral Loads	5-4
5.3.1	Seismic Forces.....	5-4
5.3.2	Wind Loads.....	5-5
5.3.3	Earth Pressure.....	5-5
5.4	Volume Changes	5-6
5.4.1	Shrinkage and Creep.....	5-7
5.4.2	Temperature-Related Volume Changes	5-8
5.4.3	Volume Change Effects on the Structural System	5-9
5.4.4	Expansion Joints.....	5-10
5.4.4.1	Framing at Expansion Joints	5-12
5.4.4.2	Expansion Joint Detail	5-13
5.5	Considerations for Fire	5-15
5.6	Structural Components	5-16
5.6.1	Stemmed Floor Members	5-16
5.6.2	Hollow Core and Flat Slabs.....	5-22
5.6.3	Composite Topping for Stemmed and Slab Floor Members	5-22
5.6.4	Beams and Spandrels.....	5-22
5.6.5	Columns.....	5-24
5.6.6	Wall Panels	5-24
5.6.7	Stair/Elevator Cores.....	5-24
5.7	Lateral Force-Resisting Systems	5-25
5.7.1	Floor Diaphragms.....	5-25
5.7.2	Shear Walls	5-26
5.7.3	Moment Resisting Frames.....	5-26
5.7.4	Ramp Truss Action	5-27
6.0	CONNECTIONS.....	6-1
6.1	General	6-1
6.2	Continuity of Load Path	6-1
6.3	Ductility.....	6-2
6.4	Gravity Connections.....	6-2
6.5	Lateral System Connections.....	6-3
6.6	Seismic Design Considerations.....	6-4

6.7	Structural Integrity Connections.....	6-4
6.8	Fabrication and Erection Considerations	6-6
6.9	Connection Materials.....	6-6
6.10	Galvanizing-Special Precautions	6-7
6.11	Expansion Joint Details	6-7
6.12	Common Example Connection Details.....	6-7
7.0	PRODUCTION.....	7-1
7.1	Concrete Quality	7-1
7.1.1	Admixtures	7-1
7.2	Casting Standardization	7-2
7.2.1	Products	7-2
7.2.1.1	Double Tees.....	7-2
7.2.1.2	Beams	7-3
7.2.1.3	Spandrels & Walls	7-3
7.2.1.4	Columns	7-4
7.2.2	Daps, Blockouts and Hoopings	7-4
7.3	Non-Prestressed Reinforcing	7-5
7.4	Cast-In Materials	7-5
7.4.1	Standardization	7-6
7.4.2	Inserts	7-6
7.4.3	Slaves	7-6
7.4.4	Plate Assembly Anchorages	7-6
7.5	Moldwork Formwork	7-7
7.6	Product, Interfacing and Erection Tolerances	7-7
7.6.1	Product Tolerances	7-7
7.6.1.1	Structural Conditions.....	7-8
7.6.1.2	Connection Tolerances	7-8
7.6.1.3	Visual Effects	7-8
7.6.2	Interfacing Tolerances	7-9
7.6.2.1	Door and Window Blockouts	7-9
7.7	Quality Control	7-9
7.7.1	Inspections by the Precaster	7-9
7.7.1.1	Pre-Pour Inspection	7-9
7.7.1.2	Post-Pour Inspection	7-9
7.7.1.3	Miscellaneous Inspections.....	7-9
7.7.2	Observations by the Structural Engineer of Record (SER)	7-9

7.8	Finishes	7-10
7.8.1	Floor Member Finishes.....	7-10
7.8.2	Exposed Surface Finishes.....	7-10
7.8.3	Architectural Finishes.....	7-10
7.8.4	Facade Samples	7-10
7.9	Production Summary	7-11
8.0	ERECTION CONSIDERATIONS	8-1
8.1	Introduction	8-1
8.2	Erection Considerations During Design	8-2
8.3	Preconstruction Planning	8-3
8.3.1	Erection Plan	8-5
8.3.1.1	Additional Considerations.....	8-6
8.4	Transportation and Unloading	8-6
8.5	Rigging	8-7
8.6	Stability	8-7
8.7	Field Considerations for Connections	8-8
8.7.1	General Considerations	8-8
8.7.2	Temporary Connections.....	8-8
8.7.3	Types of Connections	8-9
8.7.3.1	Bolted Connections	8-9
8.7.3.2	Welded Connections.....	8-9
8.7.3.3	Grout, Mortar and Drypack.....	8-10
8.8	Installation	8-11
8.8.1	General	8-11
8.8.2	Loadbearing Members.....	8-11
8.8.2.1	Columns	8-11
8.8.2.2	Beams and Spandrels	8-13
8.8.2.3	Wall Panels	8-13
8.8.3	Floor Members	8-15
8.8.3.1	Double Tees.....	8-15
8.9	Erection Tolerances	8-16
8.9.1	General	8-16
8.9.2	Connection Tolerances	8-17
8.9.3	Hardware	8-17

Table of Contents

8.10 Post-Installation Considerations.....	8-17
8.10.1 Protection of Work.....	8-17
8.10.2 Repairs at the Jobsite.....	8-18
8.10.3 Cleaning.....	8-19
8.10.4 Acceptance	8-19
8.11 Conclusion	8-19

INTRODUCTION

1.1

General

Parking structures are essential components of the built environment. These structures have evolved from utilitarian, non-descript, box-like structures to multi-purpose, architecturally pleasing buildings that complement the facility served. Owners have realized that accommodations for parking often represent the first and last impression that the public experiences. The quality of parking can be a pivotal factor in determining the level of customer, resident, guest, or employee satisfaction. Surface parking is often remote, undesirable, or not possible, resulting in a need for multi-level parking. In such instances, creating an attractive, functional, and durable parking structure is a critical objective of the design and construction program.

Precast, prestressed concrete has inherent characteristics that can make it the optimum structural material and framing system for parking structures. The intent of this manual is to describe features that make it a desirable choice and to serve as a guide for architects, engineers, contractors, and owners involved in the design, construction, and maintenance of parking structures.

This manual consists of eight chapters. Chapter 1 provides an overview of the content of the manual and highlights many of the beneficial features of precast, prestressed concrete. Chapter 1 also includes photographs that illustrate the flexibility and architectural design possibilities available with precast, prestressed concrete. Chapters 2, 3, and 4 contain general information relating to functional design, durability, and sustainability. Chapters 5 through 8 discuss matters

relating to structural design, production, and erection. These four chapters provide more in-depth technical information intended primarily for designers, producers, and contractors.

Information, details, and diagrams presented herein are intended as general reference material only. In no case should the material presented be considered as a substitute for the experience and engineering judgment of a design professional or producer.

Project specific criteria or regional practices should be considered and may result in alternative design approaches or solutions. PCI-certified producers are expected to produce a higher quality product than a producer that is not certified. Consult-
