Technical Report

Electromagnetic compatibility (EMC)

Part 1.1: General — Application and interpretation of fundamental definitions and terms

SA/SNZ TR IEC 61000.1.1:2025

This Joint Australian/New Zealand Technical Report was prepared by Joint Technical Committee TE-003, Electromagnetic Compatibility. It was approved on behalf of Standards Australia's Standards Development and Accreditation Committee on 12 February 2025 and by the New Zealand Standards Executive on 29 January 2025.

This Technical Report was published on 6 June 2025.

The following are represented on Committee TE-003:

- Association of Accredited Certification Bodies
- Australian Broadcasting Corporation
- Australian Industry Group
- Consumer Electronics Suppliers Association
- Department of Defence (Australian Government)
- EMC Society of Australia
- Energy Networks Australia
- Engineers Australia
- Free TV Australia
- Lighting Council New Zealand
- Ministry of Business, Innovation and Employment (MBIE)
- National Measurement Institute
- Wireless Institute of Australia

This Technical Report was issued in draft form for comment as DR SA/SNZ TR IEC 61000.1.1:2024.

Preface

This Technical Report was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003 Electromagnetic Compatibility to supersede AS/NZS 61000.1.1:2000, *Electromagnetic compatibility (EMC), Part 1.1: General — Application and interpretation of fundamental definitions and terms*.

The objective of this document is to describe and interpret various terms considered to be of basic importance to concepts and practical application in the design and evaluation of electromagnetically compatible equipment and systems.

In addition, attention is drawn to the distinction between electromagnetic compatibility (EMC) tests carried out in a standardized set-up and those carried out at other locations, for example at premises where a device, equipment or system is manufactured or at the location where a device, equipment or system is installed (*in situ* tests or measurements).

This document is identical with, and has been reproduced from IEC TR 61000-1-1:2023, *Electromagnetic compatibility (EMC) – Part 1-1: General – Application and interpretation of fundamental definitions and terms*.

As this document has been reproduced from an international document, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Contents

Preface	ii
Section FOREWORD	v
Section INTRODUCTION	vi
Section 1 Scope	1
Section 2 Normative references	2
Section 3 Terms, definitions and abbreviated terms	3
3.1 Terms and definitions	3
3.2 Abbreviated terms	5
Section 4 The electromagnetic environment	7
4.1 General	7
4.2 Coupling between emitting and susceptible devices	7
Section 5 Application of EMC terms and definitions	10
5.1 General	10
5.2 Relation between various types of levels	10
5.2.1 Emissions and immunity level (and limit)	10
5.2.2 Compatibility level	11
5.2.3 Examples to illustrate the concepts of using levels and limits	13
5.3 Probability aspects and margins	15
5.3.1 Compatibility levels and uncertainties	15
5.3.2 Standardized test	16
5.3.3 In situ test – Superposition	18
5.3.4 Lack of data	20
Section 6 Models and their limitations	21
6.1 General	21
6.2 Source models	21
6.2.1 Conducted emissions	21
6.2.2 Radiated emissions	22
6.3 Coupling models	24
6.3.1 General	24
6.3.2 Common impedance coupling	24
6.3.3 Coupling by induction	25
6.3.4 Radiative coupling	29
6.4 Susceptible device models	29

List of Figures

Figure 1 — Coupling paths between emitting and susceptible devices	8
Figure 2 — Limits and levels for a single emitter and susceptible device as a function of some independent variable (e.g., frequency)	11
Figure 3 — Emission/immunity limits and compatibility levels, with an example of emission/immunity levels for a single emitter and susceptible device as a function of some independent variable (e.g., frequency)	12
Figure 4 — Compatibility levels U_c for the odd harmonics in a public low-voltage network and examples of associated emission and immunity limits	14
Figure 5 — Limits, compatibility levels and margins, as a function of any independent variable (e.g., frequency)	16
Figure 6 — Example of the probability densities for an emission level and an immunity level, at one single value of the independent variable	18
Figure 7 — Example of superposition of disturbances	19
Figure 8 — Example of probability densities for an ultimate disturbance level (the sum of disturbance levels produced by various emitters) and the immunity levels of two types of susceptible device	20

Figure 9 — Source model for conducted emissions (source loaded by Z_{L1} and Z_{L2})	22
Figure 10 — Electric and magnetic dipole elements	24
Figure 11 — Capacitance per unit length as a function of conductor separation	27
Figure 12 — Flux density from parallel conductors	28

Section FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance on, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TR 61000-1-1 has been prepared by IEC technical committee 77: Electromagnetic compatibility. It is a Technical Report.

It forms Part 1-1 of IEC 61000. It has the status of a basic [EMC](#) publication in accordance with IEC Guide 107.

This second edition cancels and replaces the first edition published in 1992. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) the general description of the electromagnetic environment has been updated in accordance with IEC TR 61000-2-5;

- b) the description of source, of potentially susceptible equipment/systems and of coupling mechanism has been updated,
- c) elements from IEC TR 61000-2-3, that is intended to be withdrawn, as well as from IEC TR 61000-2-5, have been incorporated into this document.

The text of this Technical Report is based on the following documents:

Draft	Report on voting
77/586/DTR	77/587/RVDTR

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Report is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 61000 series, published under the general title *Electromagnetic compatibility (EMC)*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT — The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

Section INTRODUCTION

IEC 61000 is published in separate parts, according to the following structure:

Part 1: General

General considerations (introduction, fundamental principles)

Definitions, terminology

Part 2: Environment

Description of the environment

Classification of the environment

Compatibility levels

Part 3: Limits

Emission limits

Immunity limits (in so far as they do not fall under the responsibility of the product committees)

Part 4: Testing and measurement techniques

Measurement techniques

Testing techniques

Part 5: Installation and mitigation guidelines

Installation guidelines

Mitigation methods and devices

Part 6: Generic standards

Part 9: Miscellaneous

Each part is further subdivided into several parts, published either as international standards or as technical specifications or technical reports, some of which have already been published as sections. Others will be published with the part number followed by a dash and a second number identifying the subdivision (example: IEC 61000-6-1).

Technical Report

Electromagnetic compatibility (EMC)

Part 1.1: General — Application and interpretation of fundamental definitions and terms

Section 1 Scope

This part of IEC 61000, which is a Technical Report, aims to describe and interpret various terms considered to be of basic importance to concepts and practical application in the design and evaluation of electromagnetically compatible equipment and systems.

In addition, attention is drawn to the distinction between electromagnetic compatibility ([EMC](#)) tests carried out in a standardized set-up and those carried out at other locations, for example at premises where a device, equipment or system is manufactured or at the location where a device, equipment or system is installed (in situ tests or measurements).
